Please **print** your name**No Decimals No mixed numbers No complex fractions No boxed or circled answers**

1. T **F** The graph of a rational function is a smooth continuous graph with no sharp corners.
2. T **F** Every rational function has a vertical asymptote.
3. T **F** Every rational function has a horizontal asymptote.
4. **T** F The graph of a rational function can cross its horizontal asymptote.
5. T **F** The graph of a rational function can cross its vertical asymptotes.
6. **T** F A rational function can have more than one vertical asymptotes.
7. T **F** A rational function can have more than one horizontal asymptote.
8. T **F** If  $f$  is a rational function with domain elements  $a$  and  $b$  such that  $a < b$  and  $f(a) \neq f(b)$ , the graph of  $f$  must have an  $x$ -intercept between  $a$  and  $b$ .
9. T **F** If the numerator and the denominator in the rule for a rational function  $f$  have the same degree, then the  $x$ -axis is the horizontal asymptote for that function  $f$ .
10. **T** F The zeros of a rational function are the zeros of the numerator which are not zeros of the denominator.

**Remember: Asymptotes are lines!**11. Consider the function  $f$  whose rule is  $f(x) = \frac{x+2}{x-5}$ 

- a. What is the domain of  $f$ ?  $\{x \mid x \in \mathbb{R}, x \neq 5\}$
- b. What are the zeros of  $f$ ? **-2 is the only zero of  $f$ .**
- c. What are the vertical asymptotes of  $f$ ? **The line  $x = 5$ .**
- d. What is the horizontal asymptote of  $f$ ? **The line  $y = 1$ .**
- e. Calculate  $f(7)$ .  $f(7) = \frac{7+2}{7-5} = \frac{9}{2}$
